

Cognitive Psychology Applied: A Symposium at the 22nd International Congress of Applied Psychology

To present a timely analysis applying the rich resources of the current cognitive revolution, the contributors to this volume emphasize symbiotic interactions between theoretical/laboratory and applied/real-life approaches. A direct result of a symposium on general experimental psychology held during the International Congress of Applied Psychology (ICAP) in Kyoto, this volume includes papers focusing on topics in cognitive psychology that can be applied to school, business/industry, and daily life. The 20 contributors to ICAP represent not only a uniformly high level of excellence, but also a unique collection of talent from five nations: Canada, England, France, Japan, and the United States. This combined intelligence offers critical analyses of cognitive approaches to enhancing work efficiency, educating the labor force, coping with anxiety, improving mental hygiene, understanding the aging population, and exploring aesthetics in music.
