

The Chinchaga Firestorm: When the Moon and Sun Turned Blue

The biggest firestorm documented in North America-3,500,000 acres of forest burned in northern Alberta and British Columbia-created the worlds largest smoke layer in the atmosphere. The smoke was seen around the world, causing the moon and the sun to appear blue. The Chinchaga Firestorm is a historical study of the effects of fire on the ecological process. Using technical explanations and archival discoveries, the author shows the beneficial yet destructive effects of forest fires, including the 2011 devastation of Slave Lake, Alberta. Cordy Tymstra tells the stories of communities and individuals as their lives intersected with the path of the wildfire-stories that demonstrate peoples spirit, resourcefulness, self-sufficiency, and persistence in the struggle against natures devastating power. The 1950 event changed the way these fires are fought in Alberta. Forest fire scientists, foresters, forest ecologists and policy makers, as well as those who are interested in western Canadian history and ecology, will definitely want this book in their library.
