

Introductory Mathematical Analysis for Business, Economics and Life and Social Sciences (10th Edition)

This acclaimed book provides a solid mathematical foundation in business, economics, and the life and social sciences.

Beginning with precalculus and finite math topics such as equations, functions, matrix algebra, linear programming, mathematics of finance, and probability, it then progresses through single and multivariable calculus. An abundance and variety of applications appear throughout, enabling the reader to continually see how the mathematics can be put into practice.
