

Present and Future of the Cosmic Microwave Background: Proceedings of the Workshop Held in Santander, Spain, 28 June - 1 July 1993 (Lecture Notes in Physics)

These review articles by outstanding specialists cover the present status of the observations of the spectrum and of the anisotropies of the cosmic microwave background radiation. Experimental developments, data analysis and related theoretical aspects are also treated. The idea is to review and discuss at a level accessible to non-specialised astronomers and graduate students the most recent developments in this field as well as the future perspectives for astrophysics and cosmology in particular.
